

## Proware announces proBackup storage solution SN-1400P

February 2003 Taipei, Proware Technology Corp. is pleased to announce its newly innovated proBackup storage solution – SN-1400P. The SN-1400P is a reliable, cost-effective NAS IDE subsystem with proBackup solution. The proBackup is a web-based application by the Java technology designed specifically for use with all of the Proware's PRONAS subsystem. proBackup provides end users a friendly Java GUI that makes versatile backup functions available to general users. They can easily backup and restore their files by proBackup storages, and they do not need to install proprietary software in their machines. It is also simple to set-up a proBackup storage for a company or an organization, even for non-IT-pro person.

## Key Features:

- Enable backup service on various platforms with JAVA support, like Windows 98/NT/2K/XP, Linux, AIX, Solaris, etc.
- JAVA GUI helps users easily backup/restore personal files. Users are not required to install proprietary programs.
- Task-oriented concept helps users to manage and track various backup/restore activities.
- Consolidate individuals' data of an organization to a central backup storage. Administrator has the privilege to restore every piece of information anywhere.
- Support high-speed Hard Drive backup / restore.
- Easy to extend the backup storage space.
- 4 Ultra DMA hard drives with RAID 5 support.
