

Proware announces SCSI-to-IDE JBOD Solution

Most cost-effective IDE expansion JBOD enclosure

April 2003 Taipei, Proware Technology Corp. is pleased to announce its newly innovated SCSI-to-IDE JBOD solution – the Simbolo SB-3140J-SI. Purpose-built for high capacity expansion, cost-effective data storage applications, the Simbolo SB-3140J-SI allows for up to 14 hot-swappable IDE hard disk drive bays, which are connected to an intelligent backplane with SAF-TE enclosure management.

Proware was among the first to deliver IDE JBOD Enclosure scales to over 4 Terabytes per chassis. All major components including drives, power supplies and fans are redundant and removable for easy serviceability.

The Environmental Monitoring unit activates alarms in case of irregularities and monitors the internal environment of the disk enclosure such as power supplies, temperature, voltage and cooling fans. Not only enclosure temperature, it can monitor the temperature for each HDD. Cooling of the subsystem is achieved via high quality advanced cooling modules designed for efficient cooling of high RPM drives. Reliability is insured with load sharing hot swappable PFC redundant 300W power supply units.

- Most cost-effective IDE expansion JBOD enclosure scales to over 4 Terabytes per chassis.
- Supports up to fourteen (14) 1" hot - swappable Ultra DMA hard drives.
- All major components including drives, power supplies and fans are redundant and removable for easy serviceability.
- SAF-TE supports.
- Industry-stand 19-inch rackmount.
- Local audible event notification alarm.
- Environmental monitoring unit.
- Real time drive activity and status indicators.
